Diesel Specialists, LLC has over 35 years' experience rebuilding Detroit Diesel engines, following the strictest of remanufacturing procedures First, engine cores are completely disassembled and all parts are cleaned in a chemical vat Engine parts are then dispersed to our specialized workshops for inspection and remanufacturing

Detroit Diesel Governor Booster Spring Tension Adjustment

All Detroit Diesel Series 53, 71, and 92 engines are equipped with governor booster springs. The purpose of these springs is to reduce the force required to move the engine governor lever (connected to the engine fuel injection pump) from idle to full throttle. It reduces this force by helping to pull the engine governor toward the full

Operation and Maintenance Instructions Manual

The diesel engine is an internal combustion power unit, in which the heat of fuel is converted into work in the cylinder of the engine. In the diesel engine, air alone is compressed in the cylinder; then, after the air has been compressed, a charge of fuel is sprayed into the cylinder and ignition is accomplished by the heat of compression.
