Encyclopedia of Animal Behavior

Humans have always relied heavily on animals. We have worshipped them, befriended them, sacrificed them, domesticated them, eaten them, hunted them, drawn them, and written about them. We have come to appreciate them, especially in their natural habitats, as an essential part of our world. They are creatures that deserve our respect and reward our curiosity. As intrinsic as they are to the ecological balance of our world, animals are under threat from their human admirers, and in dire need of our help. Habitat destruction spells disaster for many species, leaving them teetering on the brink of extinction. Only through a greater understanding of the fragile balance that exists between species and their habitats will it become possible for us to ensure the survival of our precious wildlife heritage. This comprehensive encyclopedia presents a wide-ranging survey of four major groups of living things: mammals, birds, reptiles, and amphibians. The text is written by a team of international experts in the zoological sciences. It is carefully constructed to be read and appreciated by everyone with an interest in natural history. Complemented by superb full-color photographs by the world's leading wildlife photographers, and specially commissioned illustrations, maps, and diagrams, this stunning volume gives an up-to-date overview of nature's most enthralling creatures. A team of internationally renowned authorities has provided the text for this publication. The photographs have been provided by some of the world's leading wildlife photographers.
