anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site The Professor is In, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including:

The Practical Guide to Long Range Hunting Rifles

In his original version of Long-Range Precision Rifle, U.S. Army sniper and avid precision rifle and long-range rifle shooter, competitor, and enthusiast Anthony Cirincione II put extreme accuracy with a precision rifle within the reach of any shooter. His instruction was based on 26 months of combat deployments in Iraq and Afghanistan and his training of squad-designated marksmen for his battalion. His precision-shooting book proved to be an instant best-seller. In this expanded edition, Cirincione adds five new sections: "External Ballistic Truing." Although he briefly detailed the process of external ballistic truing in the first edition, given the level of importance to midrange and long-range target engagement, he believes that the process of truing deserves a detailed description. "Determining Fast and Correct Windage Adjustments or Holds." Cirincione covered the creation of a custom windage card for specific guns and pet loads in the first edition, but this added windage section shares his current process. The old way works fine, but his new method is faster and more precise, and doesn't require you to look at a card. As always, the process can be applied to any caliber you are using. "Midrange and Long-Range Target Engagement: Magneto Speed V3 Ballistic Chronograph vs. External Ballistic Truing." This section features a report Cirincione sent to the U.S. Army Sniper School outlining the testing of a barrel-mounted chronograph. The test pitted the device against his current method of external ballistic truing, given target engagements from 100 to 1,000 yards. It gives you a couple of different options to get on target at extended range. "How to Build a Switch-Barrel Rifle, and the Process of Swapping Barrels." As Cirincione has moved away from factory bolt-action rifles and into custom-built guns, he thought readers would appreciate information on how to build one. Not only that, but he also includes specific information on how to remove and add barrels of different calibers to that same stock and action. "Suppressed Subsonic Shooting." This section is about precision shot placement with subsonic ammo out to 400 yards. Long-Range Precision Rifle: Expanded Edition lays out the most up-to-date methods for getting the most out of whatever rifle you are using. After discussing rifle, ammunition and optic selection, Cirincione reveals his tried-and-true methods of gathering and recording data. He takes you step-by-step through the process of discovering how to make your rifle perform at its peak with every

shot. You will also learn how to adjust for environmental factors and obstructions that lie between you and your target, and discover why handloading and building your own precision cartridges is an extra step well worth taking. "Anthony Cirincione was an amazing teacher while helping me get ready for sniper school. His knowledge and meticulous rifle setup techniques were instrumental to my success. Students and further help the sniper community."
