Cool Builds in Minecraft! (GamesMaster Presents)

This is the first book that sheds light on global game industries and cultural policy. The scope covers the emerging and converging theory and models on cultural industries and its development, and their connection to national cultural policy and globalization. The primary focus of the book is on Asian cultural policy and industries while there are implicit comparisons throughout the book to compare Asia to other global markets. This book is aimed at advanced undergraduates, graduate students and faculty members in programs addressing cultural policy and digital games. It will also be of interest to those within the cultural policy community and to digital games professionals.

This volume traces humanity's exploration of the heavens from Neolithic times to NASA. Moving beyond early superstitions and cosmology, scientific study began by first making calendars and predicting astronomical events. The invention of the telescope around 1600 marked a watershed in the field of astronomy. Since the first recognition that the planets are other worlds, the wonders of space have puzzled and enthralled us. With a wealth of full-color and archival images and a compelling narrative style, this text charts our fascination with stars from before Stonehenge to the search for exoplanets and extraterrestrial life.

From AI to Robotics: Mobile, Social, and Sentient Robots is a journey into the world of agent-based robotics and it covers a number of interesting topics, both in the theory and practice of the discipline. The book traces the earliest ideas for autonomous machines to the mythical lore of ancient Greece and ends the last chapter with a debate on a prophecy set in the apparent future, where human beings and robots/technology may merge to create superior beings – the era of transhumanism. Throughout the text, the work of leading researchers is presented in depth, which helps to paint the socio-economic picture of how robots are transforming our world and will continue to do so. This work is presented along with the influences and ideas from futurists, such as Asimov, Moravec, Lem, Vinge, and of course Kurzweil. The book furthers the discussion with concepts of Artificial Intelligence and how it manifests in robotic agents. Discussions across various topics are presented in the book, including control paradigm, navigation, software, multi-robot systems, swarm robotics, robots in social roles, and artificial consciousness in robots. These discussions help to provide an overall picture of current day agent-based robotics and its prospects for the future. Examples of software and implementation in hardware are covered in Chapter 5 to encourage the imagination and creativity of budding robot enthusiasts. The book addresses several broad themes, such as AI in theory versus applied AI for robots, concepts of anthropomorphism, embodiment and situatedness, extending theory of psychology and animal behavior to robots, and the proposal that in the future, AI may be the new definition of science. Behavior-based robotics is covered in Chapter 2 and retells the debate between deliberative and reactive approaches. The text reiterates that the effort of modern day robotics is to replicate human-like intelligence and behavior, and the tools that a roboticist has at his or her disposal are open source software, which is often powered by crowd-sourcing. Open source meta-projects, such as Robot Operating System (ROS), etc. are briefly discussed in Chapter 5. The ideas and themes presented in the book are supplemented with cartoons, images, schematics and a number of special sections to make the material engaging for the reader. Designed for robot enthusiasts – researchers, students, or the hobbyist, this comprehensive book will entertain and inspire anyone interested in the exciting world of robots.

Parenting is a practical and entertaining antidote to the extreme stress of modern parenting. It pokes fun at the unrealistic goals and expectations thrust on parents today, and offers a way to raise kids with less pressure, less guilt, less stress and fewer cupcakes baked at midnight. It's not about doing a bad job. It's about recognising that parents don't have to be perfect. What's wrong with toasted sandwiches for dinner? Kids sharing bedrooms and bathrooms? The fact your child's first word was 'Bluey' rather than 'Mama'? Half-arsed parents let their kids succeed - and fail - on their own merits. They will protect them from bullies, head lice and mullet hairstyles, but not from every knock and bump of life that will make them better adults. Drawing on worrying research into anxiety in children and parents in this era of helicopter parenting, journalist and doctor of education Susie O'Brien lays out the case for embracing a bit of half-arsed parenting in your house. By doing half as much, you might just make everyone twice as happy. Here's how.
